

GREENVALE ENVIRONMENTAL CONTROL CENTRE

EMERGENCY BRIEFING YEAR 2045.

Greenvale was once known as a city of innovation and progress.
Over time, rapid growth created serious environmental problems.
Waste increased. Energy systems relied on fossil fuels. Misleading green claims
became common. Unsustainable daily habits spread across the city.
Today, the Environmental Monitoring Network has issued a critical alert.
Landfills are near capacity. Carbon emissions are rising. Public trust is falling.
The Mayor has activated an emergency response unit:

THE SUSTAINABILITY TASK FORCE

Your team has been granted temporary access to the Environmental Control
Centre.

To save Greenvale, you must restore four damaged city systems.

Each successful mission will generate an access code.
Use the final code to unlock the Policy Decision Console.
The future of Greenvale now depends on your decisions.
